What follows is the frozen `email.html` for this revision, printed at its true 600px width — not a mockup and not a re-render. This document shows the light palette only; dark-mode clients receive the same HTML with the `prefers-color-scheme` block in `template-s/brand-shell.mjml` applied, which is a client render mode rather than a second issue. Merge tokens are annotated for review and are not part of the frozen bytes.

## Pre-send checks

|                |                                                     |
|----------------|-----------------------------------------------------|
| QA verdict     | QA PASSED                                           |
| HTML size      | 73,611 BYTES within budget — Gmail clips at 104,448 |
| Plaintext part | 5,966 bytes                                         |

## Failures

None. Nothing blocks this issue from being approved.

## Warnings

- brand.legalName is still a placeholder: TODO: confirm sending entity — aspiretss.com footer lists "Aspire Tech Services & Solutions Limited"
- brand.postalAddress is still a placeholder: TODO: valid physical postal address (CAN-SPAM) — not yet confirmed

Warnings do not block a send. Placeholder warnings on legal name and postal address are the exception worth reading twice: a valid physical postal address is a CAN-SPAM requirement, and the sending legal entity must be confirmed before this goes to a real list.
